DETAILED ACTION

Claim Objections

Claims 12-13 are objected to because of the following informalities: The element commonly referred to as “chromium” is spelled, “chrome.” Appropriate correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 10-13 are rejected under 35 U.S.C. 102(b) as being anticipated by the journal article by Chien et al.

Chien teaches supporting copper and chromium oxides on 200-270 mesh (<500 microns) alumina and heating at 900°C in either a reducing (or an oxidizing atmosphere); thus forming sintered samples. See section 2.1. The samples heated in the reducing atmosphere were subject to reoxidation, see Section 2.2, thus forming the sintered metal oxides. See also Figure 2 and Figure 4 with associated text on page 79 and 84.

Claim 10 is rejected under 35 U.S.C. 102(b) as being anticipated by Kim ‘262.

Art Unit: 1793

Kim teaches a sintered catalyst containing copper oxide and yttrium oxide (a transition metal oxide) that has a size of 200 mesh or greater (less than 75 microns).

See abstract, claims, and examples of Kim.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Lee '772, Huba '535, Farruto '658, Ichimura '829, Yokoyama '300, Love '454, Cheung '485, and Pak '041 all teach sintered copper oxide containing catalysts.
